B. Advanced Custom Calling Features (Cont'd)

2. Descriptions of Advanced Custom Calling Features are as follows: (Cont'd)

*66 Busy Number Redial - When activated, automatically redials the last number the customer attempted to call. If the called line is not busy, the call will be placed. If the called line is busy, a confirmation announcement is heard, the customer hangs up and a queuing process begins. For the next thirty minutes both the calling and the called lines are checked periodically for availability to complete the call. If during this queuing process the called line becomes idle, the customer is notified, via a distinctive ring, that the network is ready to place the call. When the customer picks up the telephone the call will automatically be placed. The activation code is *66. The user can press *86 to deactivate.

Pay per use customers will be charged upon dialing the activation code without any specific prior request for the feature.

Priority Call - Allows a customer to assign a maximum of 15 callers' telephone numbers to a special list. A distinctive ringing pattern accompanies incoming calls from numbers on that list. If the customer is engaged in another call, and a call from one of the designated numbers arrives, a distinctive Call Waiting tone accompanies the incoming call.

Distinctive Ring - Provides two or more different phone numbers and rings for a single telephone line. Used to distinguish incoming calls. The designated primary number will receive a normal ringing pattern, other numbers will receive distinctive ringing patterns.

Selective Call Forward - Allows a customer to program up to 15 telephone numbers to be forwarded automatically to another telephone number. Incoming calls that are on the Selective Call Forward list will be forwarded to the predetermined telephone number. Selective Call Forward is accessed by dialing "*63" or "1163" from a rotary telephone. After gaining access to the service, the customer can activate or deactivate by dialing an activation/deactivation code as directed by an announcement. Entries on the Selective Call Forward list, as well as the forward-to telephone number, can be changed at any time.

Selective Call Rejection - Allows a customer to reject call attempts from up to 15 telephone numbers. To use this service, the customer preprograms telephone numbers of calling parties they wish to reject. Any call attempts to the customer's telephone from these specified numbers will be prevented from being completed to that customer. The calling party will get a recording advising the caller that the called party is not receiving calls. The customer can also add an "unknown" caller to the Selective Call Rejection list by activating the feature immediately after receiving an unwanted call. Selective Call Rejection is activated by dialing "*60" for "1160" from a rotary telephone. After gaining access to the service, the customer can activate or deactivate by dialing an activation/deactivation code as directed by an announcement.

B. Advanced Custom Calling Features (Cont'd)

2. Descriptions of Advanced Custom Calling Features are as follows: (Cont'd)

Selective Call Acceptance - Allows a customer to select specific telephone numbers from which calls are to be received. All other calls are intercepted and routed to a recorded announcement that informs the caller that the customer is not accepting calls. Selective Call Acceptance is accessed by dialing "*64" or "1164" on a rotary telephone.

Call Trace - Allows a customer to automatically activate (*57 or 1157 from a rotary phone) a trace record of the last incoming call tracing feature. The customer automatically authorizes and requests the Company to release the results of any and all traces initiated by the customer directly to the customer's servicing law enforcement agency. The customer must contact the Company within ten (10) days after activating a call trace or the trace record will automatically be deleted from the system.

Call Trace is available on a monthly subscription basis, or on a pay per use basis. Pay per use customers will be charged upon dialing the activation code without any specific prior request for the feature.

Caller ID with Name - Permits a customer to receive the calling name and telephone number for calls placed to that customer, if the call is not placed from outside of the Call ID area, through an operator or via telephone credit card, provided the calling party has not activated the per call restrict options and where technologically feasible. Before placing an outgoing local telephone call, customers with per call restrict may designate their number as private and prevent the delivery of their name and telephone number to the called party through the Call ID feature for that call by dialing the Call ID restrict activation code.

Caller ID Blocking - per call - Allows the calling customer to permit or withhold delivery of the customer's telephone number on each call. To block delivery of the number, the customer first dials an access code, then the customer dials the telephone number.

Caller ID Blocking - per line - Provides default blocking of delivery of the calling customer's telephone number. Blocking can be deactivated by the customer by dialing an access code before each call. When the customer hangs up, the default blocking is reinstated.

3. Definitions of Centrex Service Features

- .1 The Basic Business Group (BBG) feature provides the capability of partitioning the DCO System into groups of lines. Each group of lines is normally associated with a single business customer. BBG uses central office capabilities to provide services similar to those provided by a Private Branch Exchange (PBX), including a unique dialing plan, custom calling features, dialing and facility restrictions, and a specialized Traffic Measuring and Recording System (TMRS). A complete listing of these features can be found in 2. Above, including the Multiline Variety Pack which consists of MVP intercom, 3 Way Calling, call waiting, distinctive alerting/call waiting indication, out WATS ¹, and private facility access.
- .2 Call Forward Busy when activated, causes all calls attempting to terminate to a subscriber's line when the line is busy to be redirected to another line. The activation/deactivation of this feature may be subscriber-controlled (variable) or telco-controlled (fixed).
- .3 Call Forward No Answer allows all calls that terminate to a subscriber's line when the line is idle to ring that line a specified number of times before being redirected to another line. The forward-to line must be served by the same central office as the forwarded line. The activation/deactivation of this feature may be subscriber-controlled (variable) or telco-controlled (fixed). (C)
- .4 The following three features described below are options to the Call Forwarding feature that are available only to members of a basic Business Group.
 - .4.1 Call Forward No Answer Incoming Only allows only incoming calls that terminate to a Business Group subscriber's line when the line is idle to ring that line a specified number of times before being redirected to another line. The forward-to line must be served by the same central office as the forwarding line. CFDAIO restricts forwarding of calls based on the source of the call to be forwarded. Calls that originate outside the Business Group are automatically forwarded on no answer, while calls from inside the group or from a private facility receive normal call treatment. The activation/deactivation of this feature may be subscriber-controlled (variable) or telco-controlled (fixed).
 - .4.2 Call Forward Busy Incoming Only allows only incoming calls attempting to terminate to a Business Group subscriber's line. CFBLIO restricts forwarding of calls based on the source of the call. Calls that originate outside the Business Group are automatically forwarded on busy, while calls from inside the group or from private facility receive busy tone. The activation/deactivation of this feature may be subscriber-controlled (variable) or telco-controlled (fixed).

3. Definitions of Centrex Service Features (Cont'd)

.4 (Cont'd)

.4.3 Call Forward Busy Within Group Only allows all calls attempting to terminate to a Business Group subscriber's line when the line is busy to be redirected to another line within the group. CFBLWG restricts forwarding of calls in a Business Group based on the destination to which the call may be forwarded. The forward-to number must be in the same Business Group as the forwarding line, thus preventing the subscriber from activating CFBL to a forward-to number outside the Business Group. When the subscriber is off-hook, all calls, whether from inside or outside the group, are forwarded to a subscriber-specified station within the group.

.5 Do Not Disturb allows a subscriber to prevent incoming calls from ringing his/her line by diverting them to a tone or recorded announcement (RCAN). The feature may be implemented in one of three ways: 1) without a Personal Identification Number (PIN) override option; 2) with a PIN override that is fixed (such as PIN override programmed by the telephone company); or 3) with a PIN override that is variable (set and changed by the subscriber).

.6 Call Hold allows a subscriber to put any call in progress on hold in order to initiate a second call. Answer a waiting call, consult privately with another party, or return to a previously held call. If a second call is established, the subscriber who initiates it (the controlling party, or controller) may alternate between calls. The two calls may not be conferenced, and only one call may be held at a time.

.7 Call Pick-Up allows a subscriber in a specified Call Pick-Up group to answer the call that is ringing at another station in the same group by dialing the CPU access code.

.8 Call Transfer allows a subscriber to transfer any established call to another station.

.9 Directed Call Pick-Up Non Barge-In allows a Business Group subscriber to dial an access code and a station number to answer a call that is ringing at another station within the Business Group.

4. Each Centrex line may be arranged for two-way, one-way incoming or one-way outgoing operation depending upon the option chosen by the customer at the time the line is installed. When a change in the arrangement is requested by the customer, the appropriate service charges will apply.
