TARIFF FORMAT

Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the MI C.C. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14.

Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

SECTION 1 - DEFINITIONS

Access Line: An arrangement, which connects the Customer's telephone to a designated switching center or point of presence.

Authorized User: A person, firm, corporation, or any other entity authorized by the Customer to utilize the Carrier's service.

MI C.C.: Michigan Corporation Commission.

Basic Exchange Service: Basic telephone service furnished within an exchange area or local service area.

Call Waiting/Cancel Call Waiting: Call Waiting permits the customer engaged in a call to receive a tone signal indicating a second call is waiting, and by operation of the switch hook, to place the first call on hold and answer the waiting call. The customer may alternate between the two calls by operation of the switch hook but a three-way conference cannot be established. In addition, the Cancel Call Waiting feature provides the customer who has Call Waiting with the ability to disable the Call Waiting feature for the duration of a call. The feature is automatically deactivated when the customer terminates the call in progress. Call Waiting is not offered as a compatible service to customers who also subscribe to Call Forwarding Busy and/or Call Forwarding Don't Answer.

Caller ID: Is an arrangement, which permits a customer with local Exchange Service other than foreign central office service to receive the calling telephone number for calls placed to the customer. The calling telephone number will be forwarded from the terminating central office to compatible customer provided display equipment associated with a customer's Local Exchange Service. The calling telephone number will be delivered during the first silent interval of ringing. For calls originating from a line within a multi-line hunt group, only the main telephone number will be delivered. If the calling telephone number is not available for forwarding to the called party, the customer's display device will record the time of day and date, and show "OUT OF AREA" and in some cases, dashes (--- ----), for the non- available numbers. The calling telephone number is unavailable from calls made via some large PABX systems within the Customized Local Area Signaling Service calling area, from most cellular radio calls, and currently from interexchange carrier calls. Compatible customer provided display equipment is required for this service.

- 1) Any customer subscribing to Caller ID will be responsible for the provision of a display device, which will be located on the customer's premises. The installation, repair, and technical capability of that equipment to function in conjunction with the feature specified herein will be the responsibility of the customer. The Company assumes no liability and will be held harmless for any incompatibility of this equipment to perform satisfactorily with the network features described herein.
- 2) Telephone numbers are not available on operator-handled calls.
- 3) Telephone numbers transmitted via Caller ID are intended solely for the use of the Caller ID subscriber. Resale of this information is prohibited by this Tariff.

SECTION 1 - DEFINITIONS, (Continued)

Caller ID Blocking - Enables the customer to prevent their phone number from being displayed on outgoing calls. Certain types of telephone configurations such as paystations are not capable of utilizing these blocking options. Calls to "800", "900" or 9-1-1 numbers will not be blocked regardless of blocking options elected. There are two available options:

- a. Complete Blocking - The customer's line is defaulted to block disclosure of the customer's phone number on all outgoing calls. By dialing a unique activation code, the customer can change the blocking status and allow their phone number to be displayed at the called party's location (if that party has Caller ID).
- b. Selective Blocking - The customer's line is defaulted to display the customer's phone number on all outgoing calls. By dialing a unique activation code the customer can prevent their phone number from disclosure at the called party's location. This type of blocking is the default for all customers that do not make an affirmative blocking selection.

After a customer dials a call blocking or call enabling activation code, they will receive a recorded announcement regarding the current call blocking status of the line, prior to hearing the dial tone.

Caller ID with Name: is an arrangement, which permits a customer who subscribes to Caller ID service to receive the phone number and name of the calling party, pursuant to Caller ID limitations, on a customer provided display device. When calls are marketed private by the calling party, number and name cannot be received.

Call Return: allows a customer to return the last incoming call whether it is answered or not. Upon activation (*69 or 1169 from a rotary phone) of the feature the customer receives an automated voice response message stating the number of the last party who called, and is given the option of returning the call. If the called line is found to be busy, the network will go through the same process described above for Call Return. Call Return will not return a call to a blocked number. The customer will hear a recording explaining that the call cannot be returned.

Company or Carrier: Frontier Communications of America, Inc. unless otherwise clearly indicated by the context.

Customer: The person, firm, corporation or other entity which orders, cancels, amends or uses service and is responsible for payment of charges and compliance with the Company's tariff.

Equal Access: Where the local exchange company central office provides interconnection to interexchange carriers with Feature Group D circuits. In such end offices, customers presubscribe their telephone line(s) to their preferred interLATA carrier.

Exchange Area: An area within which the Company holds itself out to furnish telephone service from one or more central offices serving that area in accordance with the provision of the tariffs.

Intrastate Communications: Any communications that originates and terminates within the same state and is subject to the oversight by a state regulatory commission as provided by the laws of that state.
